

AI Workflow Audit and Tool Setup

Type: Assignment Code:FL-01 Track: General AI Fluency When: Week 1 Workload:4h
Phase :Onboarding

1. List 10 to 15 recurring tasks from your real week (study, work, side projects). Classify each: just me, delegate to AI with review, collaborate with AI, or fully automate. One line of rationale per task.

Task	Classification	Why?
Attend university lectures	Just me	I need to actively listen and participate.
Study ML concepts	Collaborate with AI	AI explains difficult topics and answers questions.
Complete FlyRank ML assignments	Collaborate with AI	AI helps explain requirements, but I complete and verify the work.
Write Python code	Delegate to AI with review	AI can generate code, but I review and test it myself.
Debug ML errors	Collaborate with AI	AI helps identify issues, but I verify the fixes.
Read research papers	Delegate to AI with review	AI summarizes papers, but I read important sections myself.
Create study notes	Fully automate	AI can generate organized notes from my materials.
Prepare presentation slides	Delegate to AI with review	AI drafts content, then I edit and personalize it.
Plan weekly study schedule	Collaborate with AI	AI suggests a schedule, but I adjust it based on my workload.
Practice coding problems	Just me	Solving problems myself is essential for learning.
Improve LinkedIn posts	Delegate to AI with review	AI improves wording, but I keep the ideas my own.

Write GitHub README files	Delegate to AI with review	AI drafts documentation that I review before publishing.
---------------------------	-----------------------------------	--

2. Set up your free toolkit: Claude, ChatGPT, and Anthropic Academy accounts. Enroll in AI Fluency: Framework & Foundations and complete at least the first module.

3. Create one Claude Project with custom instructions: who you are, tone preferences, current goals.

4. Pick the three audit tasks you will reuse in FL-02 through FL-04, and define what "done well" means for each.

Machine Learning Assignment Completion

Success means

- Notebook runs without errors.
- Meets all requirements.
- I understand the solution.

Python Debugging

Success means

- Bug is fixed.
- Code works.
- I understand the cause.

Learning Machine Learning Concepts

Success means

- I can explain the concept.
- I can implement a simple example.
- I can answer related questions.
